#### **DETAILED ACTION**

This Office Action is responsive to the Remarks filed on April 17, 2006. However, the rejection is made final for the following reasons of record.

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 7-10, and 12-23, 30-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roberts et al., U.S. Pat. No. 6,329,089 B1, in view of Parise, U.S. Pat. No. 6,057,050.

Rejection of claims 1, 7-10, and 12-38 drawn to a method of operating a fuel cell system.

Roberts et al., teach a method of operating a fuel cell system comprising a fuel cell stack, the method comprising monitoring voltages of a set of fuel cells and restricting coolant flow through the stack when one or more of the voltages decreases from a predetermined voltage range (Fig. 2). It teaches unrestricting coolant flow through the stack It teaches restricting and unrestricting coolant as a function of time; to cause voltages to be a predetermined level (col. 4, lines 58-63; col. 6, lines 52-55; col. 8, lines 34-43; col. 10, lines 35-40; Fig. 2).

Parise teaches a method of operating a fuel cell system comprising a fuel cell stack (col. 2, lines 17-28), the method comprising heating a first end plate (col. 7, lines 9-17). It teaches first heating element different than first end plate and is performed electrically (abstract; col. 4, lines 44-57). It teaches heating element is adjacent to first end plate (Fig. 4). It teaches flowing a fluid through a channel defined by first end plate; wherein fluid is heated (col. 5, lines 8-15).

Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to insert the teachings of Parise into the teachings of Roberts et al., because Parise teaches that by heating the end plate via thermal management system can control the heat generation in the fuel cell and hence improve cell performance and extend the fuel cell life.

### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 24-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Roberts et al., U.S. Pat. No. 6,329,089 B1.

Roberts et al., teach a method of operating a fuel cell system comprising a fuel cell stack, the method comprising monitoring voltages of a set of fuel cells and

Application/Control Number: 09/896,268 Page 4

Art Unit: 1745

restricting coolant flow through the stack when one or more of the voltages decreases from a predetermined voltage range. It teaches unrestricting coolant flow through the stack (col. 4, lines 58-63; col. 6, lines 52-55; col. 8, lines 34-43; col. 10, lines 35-40; Fig. 2).

Thus, the claims are anticipated.

## Response to Arguments

5. Applicant's arguments filed April 17, 2006 have been fully considered but they are not persuasive. Applicant argues that "insofar as Robert's method involves restricting coolant flow, the restriction is based on the measurement of a cell *temperature parameter*, not on one or more *monitored voltages*." However, Roberts's discloses that a "voltage reversal occurs...resulting in a negative cell voltage." (col. 7, lines 32-36). It also teaches that "starting the flow of coolant can initiate a cell voltage reversal in the cooler outermost cells. Thus, care should be taken with the timing and rate at which coolant flow is commenced to avoid voltage reversal and/or over-heating." (col. 8, lines 34-43). Therefore, Robert's discloses restricting coolant flow when there is a decrease in voltage (voltage reversal).

#### Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Angela J. Martin whose telephone number is 571-272-1288. The examiner can normally be reached on Monday-Friday from 9:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
